

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|------------------|---|--|--|
| Organizing Idea | Number: Quantity is measured with numbers that enable counting, labelling, comparing, and operating. | | |
| Guiding Question | How can quantity contribute to a sense of number? | | |
| Learning Outcome | Students analyze quantity to 1000. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | <p>Any number of objects in a set can be represented by a natural number.</p> <p>The values of the places in a four-digit natural number are thousands, hundreds, tens, and ones.</p> <p>Places that have no value within a given number use zero as a placeholder.</p> <p>The number line is a spatial representation of quantity.</p> | <p>There are infinitely many natural numbers.</p> <p>Every digit in a natural number has a value based on its place.</p> <p>Each natural number is associated with exactly one point on the number line.</p> | <p>Represent quantities using words and natural numbers.</p> <p>Identify the digits representing thousands, hundreds, tens, and ones based on place in a natural number.</p> <p>Relate a number, including zero, to its position on the number line.</p> |
| | <p>A quantity can be skip counted in various ways according to context.</p> <p>Quantities of money can be skip counted in amounts that are represented by coins and bills (denominations).</p> | <p>A quantity can be interpreted as a composition of groups.</p> | <p>Decompose quantities into groups of 100s, 10s, and 1s.</p> <p>Count within 1000, forward and backward by 1s, starting at any number.</p> <p>Skip count by 20s, 25s, or 50s, starting at 0.</p> <p>Skip count by 2s and 10s, starting at any number.</p> <p>Determine the value of a collection of coins or bills of the same denomination by skip counting.</p> |
| | <p>An even quantity will have no remainder when partitioned into two equal groups or groups of two.</p> <p>An odd quantity will have a remainder of one when partitioned into two equal groups or groups of two.</p> | <p>All natural numbers are either even or odd.</p> | <p>Model even and odd quantities by sharing and grouping.</p> <p>Describe a quantity as even or odd.</p> <p>Partition a set of objects by sharing or grouping, with or without remainders.</p> |
| | <p>A benchmark is a known quantity to which another quantity can be compared.</p> | <p>A quantity can be estimated when an exact count is not needed.</p> | <p>Estimate quantities using benchmarks.</p> |
| | <p>Words that can describe a comparison between two unequal quantities include</p> <ul style="list-style-type: none"> • not equal • greater than • less than <p>The less than sign, $<$, and the greater than sign, $>$, are used to indicate inequality between two quantities.</p> <p>Equality and inequality can be modelled using a balance.</p> | <p>Inequality is an imbalance between two quantities.</p> | <p>Model equality and inequality between two quantities, including with a balance.</p> <p>Compare and order natural numbers.</p> <p>Describe a quantity as less than, greater than, or equal to another quantity.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|---|---|---|
| Organizing Idea | Number: Quantity is measured with numbers that enable counting, labelling, comparing, and operating. | | |
| Guiding Question | How can addition and subtraction be interpreted? | | |
| Learning Outcome | Students investigate addition and subtraction within 100. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | The order in which more than two numbers are added does not affect the sum (associative property). | A sum can be composed in multiple ways. | <p>Visualize 100 as a composition of multiples of 10 in various ways.</p> <p>Compose a sum in multiple ways, including with more than two addends.</p> |
| | <p>Familiar addition and subtraction number facts facilitate addition and subtraction strategies.</p> <p>Addition and subtraction strategies for two-digit numbers include making multiples of ten and using doubles.</p> | Addition and subtraction can represent the sum or difference of countable quantities or measurable lengths. | <p>Recall and apply addition number facts, with addends to 10, and related subtraction number facts.</p> <p>Investigate strategies for addition and subtraction of two-digit numbers.</p> <p>Add and subtract numbers within 100.</p> <p>Verify a sum or difference using inverse operations.</p> <p>Determine a missing quantity in a sum or difference, within 100, in a variety of ways.</p> <p>Solve problems using addition and subtraction of countable quantities or measurable lengths.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|---|--|---|
| Organizing Idea | Number: Quantity is measured with numbers that enable counting, labelling, comparing, and operating. | | |
| Guiding Question | In what ways can parts compose a whole? | | |
| Learning Outcome | Students interpret part-whole relationships using unit fractions. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | <p>A whole can be a whole set of objects, or a whole object, that can be partitioned into a number of equal parts.</p> <p>The whole can be any size and is designated by context.</p> <p>A unit fraction describes any one of the equal parts that compose a whole.</p> | <p>Fractions can represent part-to-whole relationships.</p> <p>One whole can be interpreted as a number of unit fractions.</p> | <p>Model a unit fraction by partitioning a whole object or whole set into equal parts, limited to 10 or fewer equal parts.</p> <p>Compare different unit fractions of the same whole, limited to denominators of 10 or less.</p> <p>Compare the same unit fractions of different wholes, limited to denominators of 10 or less.</p> <p>Model one whole, using a given unit fraction, limited to denominators of 10 or less.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|--|---|---|
| Organizing Idea | Geometry: Shapes are defined and related by geometric attributes. | | |
| Guiding Question | How can shape influence perception of space? | | |
| Learning Outcome | Students analyze and explain geometric attributes of shape. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | <p>Common geometric attributes include</p> <ul style="list-style-type: none"> • sides • vertices • faces or surfaces <p>Two-dimensional shapes may have sides that are line segments.</p> <p>Three-dimensional shapes may have faces that are two-dimensional shapes.</p> | <p>Shapes are defined according to geometric attributes.</p> <p>A shape can be visualized as a composition of other shapes.</p> | <p>Sort shapes according to two geometric attributes and describe the sorting rule.</p> <p>Relate the faces of three-dimensional shapes to two-dimensional shapes.</p> <p>Create a picture or design with shapes from verbal instructions, visualization, or memory.</p> |
| | <p>A shape can change orientation or position through slides (translations), turns (rotations), or flips (reflections).</p> <p>Shapes can be turned or flipped in the creation of art.</p> | <p>Geometric attributes do not change when a shape is translated, rotated, or reflected.</p> | <p>Investigate translation, rotation, and reflection of two- and three-dimensional shapes.</p> <p>Describe geometric attributes of two- and three-dimensional shapes in various orientations.</p> <p>Recognize the translation, rotation, or reflection of shapes represented in artwork.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|--|---|--|
| Organizing Idea | Measurement: Attributes such as length, area, volume, and angle are quantified by measurement. | | |
| Guiding Question | How can length contribute to interpretations of space? | | |
| Learning Outcome | Students communicate length using units. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | <p>Tiling is the process of measuring a length by using many copies of a unit without gaps or overlaps.</p> <p>Iterating is the process of measuring a length by repeating one copy of a unit without gaps or overlaps.</p> <p>The unit can be chosen based on the length to be measured.</p> <p>Length can be measured with non-standard units or standard units.</p> <p>Non-standard units found in nature can be used to measure length on the land.</p> <p>Standard units, such as centimetres, can enable a common language around measurement.</p> | <p>Length is quantified by measurement.</p> <p>Length is measured with equal-sized units that themselves have length.</p> <p>The number of units required to measure a length is inversely related to the size of the unit.</p> | <p>Measure length with non-standard units by tiling, iterating, or using a self-created measuring tool.</p> <p>Compare and order measurements of different lengths measured with the same non-standard units, and explain the choice of unit.</p> <p>Compare measurements of the same length measured with different non-standard units.</p> <p>Measure length with standard units by tiling or iterating with a centimetre.</p> <p>Compare and order measurements of different lengths measured with centimetres.</p> |
| | <p>A referent is a personal or familiar representation of a known length.</p> <p>A common referent from the land or body parts can be used to measure length.</p> | <p>Length can be estimated when a measuring tool is not available.</p> | <p>Identify referents for a centimetre.</p> <p>Estimate length by visualizing the iteration of a referent for a centimetre.</p> <p>Investigate First Nations, Métis, or Inuit use of the land in estimations of length.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|---|--|--|
| Organizing Idea | Patterns: Awareness of patterns supports problem solving in various situations. | | |
| Guiding Question | How can patterns characterize change? | | |
| Learning Outcome | Students explain and analyze patterns in a variety of contexts. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | <p>Change can be an increase or a decrease in the number and size of elements.</p> <p>A hundreds chart is an arrangement of natural numbers that illustrates multiple patterns.</p> <p>Patterns can be found and created in cultural designs.</p> | <p>A pattern can show increasing or decreasing change.</p> <p>A pattern is more evident when the elements are represented, organized, aligned, or oriented in familiar ways.</p> | <p>Describe non-repeating patterns encountered in surroundings, including in art, architecture, cultural designs, and nature.</p> <p>Investigate patterns in a hundreds chart.</p> <p>Create and express growing patterns using sounds, objects, pictures, or actions.</p> |
| | <p>Attributes of elements, such as size and colour, can contribute to a pattern.</p> | <p>A pattern core can vary in complexity.</p> | <p>Create and express a repeating pattern with a pattern core of up to four elements that change by more than one attribute.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|--|---|---|
| Organizing Idea | Time: Duration is described and quantified by time. | | |
| Guiding Question | How can duration support interpretation of time? | | |
| Learning Outcome | Students relate duration to time. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | <p>Events can be related to calendar dates.</p> <p>Duration can be described using comparative language such as longer or shorter.</p> <p>Duration can be measured in non-standard units, including events, natural cycles, or personal referents.</p> <p>Winter counts are First Nations symbolic calendars that record oral traditions and significant events.</p> | <p>Time can be communicated in various ways.</p> <p>Duration is the measure of an amount of time from beginning to end.</p> | <p>Express significant events using calendar dates.</p> <p>Describe the duration between or until significant events using comparative language.</p> <p>Describe the duration of events using non-standard units.</p> <p>Relate First Nations' winter counts to duration.</p> |
| | <p>Time can be described using standard units such as days or minutes.</p> | <p>Duration is quantified by measurement.</p> | <p>Describe the relationship between days, weeks, months, and years.</p> <p>Describe the duration between or until significant events using standard units of time.</p> |

Mathematics Grade 2 Curriculum

| Grade 2 | | | |
|-------------------------|---|--|--|
| Organizing Idea | Statistics: The science of collecting, analyzing, visualizing, and interpreting data can inform understanding and decision making. | | |
| Guiding Question | How can data inform representation? | | |
| Learning Outcome | Students relate data to a variety of representations. | | |
| | Knowledge | Understanding | Skills & Procedures |
| | Data can be collected by asking questions. First-hand data is data collected by the person using the data. | Data can be collected to answer questions. | Generate questions for a specific investigation within the learning environment. Collect first-hand data by questioning people within the learning environment. |
| | Data can be recorded using tally marks, words, or counts. Data can be expressed through First Nations, Métis, or Inuit stories. A graph includes features such as <ul style="list-style-type: none"> • a title • a legend • axes • axis labels Data can be represented with graphs such as <ul style="list-style-type: none"> • pictographs • bar graphs • dot plots | Data can be represented in various ways. | Record data in a table. Construct graphs to represent data. Interpret graphs to answer questions. Compare the features of pictographs, dot plots, and bar graphs. |
